

# RIVERWATCHER

## DAILY

The Riverwatcher Daily (RWD) is an addition to the Riverwatcher product line. This web based software makes it easier to access statistics, silhouettes and videos of all fish in the river. Users can view real-time information from any mobile device and see what is going on in the river at any time. Older systems are easily upgradable to RWD.

## MONITORING MADE EASY

Riverwatcher Daily gathers data on each fish in real-time and displays them on request. The system lets you know if there is any problem with the signal or something blocking the visibility. This is extremely important for those with Riverwatchers in remote places that are only visited from time to time. Zero downtime means better results and better migration overview.

## FISH IDENTIFICATION

The video and the photos can be used with other data from the Riverwatcher to sort fish in groups according to species, sex and even in farmed or wild fish.

## REAL TIME VIDEO

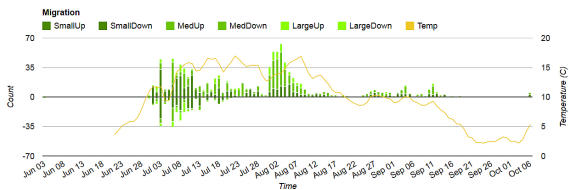

The data for every fish is then securely stored and accessible on your private web account. As registered users, you choose if you would like the results to be visible for interested guests such as locals, anglers and stakeholders. RWD gives you the opportunity to log in from anywhere to get the latest results and get the automatic reports without having to download any data or use any special software.

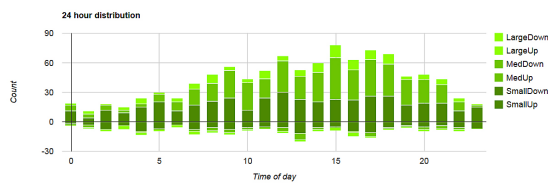

## COUNTING REPORT

Size	Up	Down	Up-Down
Small	431	152	279
Medium	456	47	409
Large	136	44	92
Total	1023	243	780

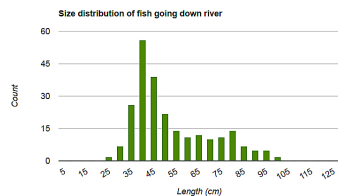

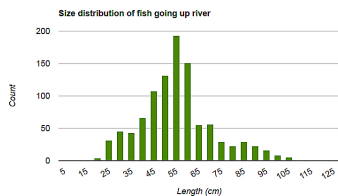

A quick overview of migration up and down the river, auto categorized by size.

Migration patterns of any given period. Click each bar for a picture of that individual fish.

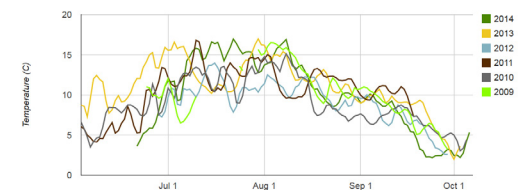

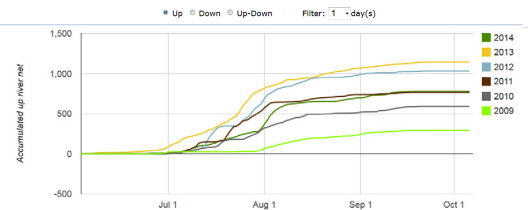

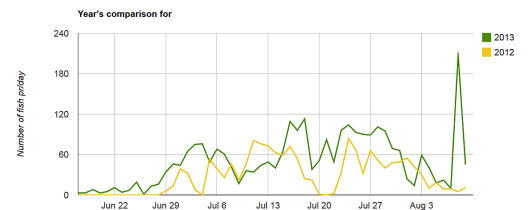

Time of day migration up and down the river, auto categorized by size.

Migration up river, auto categorized by size.

## COMPARISON BETWEEN YEARS

	Up	Down	Up-Down
2014	1023	243	780
2013	1150	5	1145
2012	1042	8	1034
2011	769	2	767
2010	605	12	593
2009	291	0	291

## BENEFITS

- Customers can view real-time information from any web based device and see what is going on in the river at any time.
- Easy access to data, no downloading needed.
- Increased up-time with alerts if there are any problems.
- Better and quicker support from Vaki and partners with easy log in to your system.
- Software updates and change of settings made easy with remote access.
- Counts and charts available without having to download data and start a specific software.
- Reports are available for any chosen period of time.
- Easy to share information and easy to compare years.
- Examine temperature records for a particular period.
- Analyse the images of each fish and sort the fish in different groups and to verify the counting.
- Customers can easily edit data if needed.
- All data securely stored and accessible on your private web account.
